

AT&T Southeast -- Tandem Homing Plan

-- A planning tool designed to help carriers identify the most efficient AT&T Southeast tandem to assign their codes in the Telcordia LERG, based on the Rate Center being served.

**This file includes the Tandem Homing Plan data: by region, by state, by LATA
Download maps by state to see a geographic representation**

- AT&T Southeast has developed a "Tandem Homing Plan" (Plan) to *optimize* interconnection in its network and minimize capacity bottlenecks at constrained tandems.
- The Plan is intended to ensure Competitive Local Exchange Carriers and Wireless Service Providers adequate sizing of trunks and available capacity for additional growth at all AT&T Southeast tandems.
- **The Tandem Homing Plan is a recommendation for carriers to use when designing their network to identify the most efficient AT&T Southeast tandem in which to assign their codes in the LERG based on the Rate Areas being served.**
- The AT&T Southeast Tandem Homing Plan identifies every AT&T rate center in a LATA in which AT&T is the Local Exchange Carrier providing service. The Plan principally identifies the AT&T Southeast Tandem Homing Arrangement by Rate Area, thereby allowing Carrier's homing architectures to resemble AT&T's homing architecture.
- AT&T Southeast is recommending Carriers utilize the tandem associated with the rate center, as identified in the Plan when entering the tandem in Telcordia's Routing Database (LERG) for each NXX allocated to the Carrier.
