**Carrier Notification****SN91083763**

Date: July 29, 2003

To: Wireless Service Providers (WSP)

Subject: WSP - Signaling System 7/Integrated Service Digital Network User Part (SS7/ISUP)  
Signaling Option for Wireless E9-1-1 Service

This is to advise that during the first quarter 2004, BellSouth will offer an additional industry standard signaling option with its E9-1-1 Service by supporting the use of SS7/ISUP signaling for Wireless E9-1-1 calls.

The need to provide and maintain the reliability and integrity of E9-1-1 Service is a top priority for BellSouth. Therefore, provisioning and implementation of SS7/ISUP trunking for Wireless E9-1-1 Service is subject to due date negotiation and coordination between BellSouth and the Wireless Service Provider.

Interconnecting Wireless Service Providers with SS7/ISUP capable originating switches will be permitted to order Type 2C E9-1-1 trunks that are controlled via SS7/ISUP, using only the ISUP parameters specified in the BellSouth Wireless E9-1-1 Interconnection Guide. Carriers may also continue to use and order Type 2C Feature Group D or Centralized Automatic Message Accounting (CAMA) trunks, if desired and where applicable. The use of SS7/ISUP signaling is not mandatory.

The BellSouth Wireless E9-1-1 Interconnection Guide will be updated by December 31, 2003, and can be obtained from the BellSouth Interconnection Services' Web site at:
