**Carrier Notification
SN91083923**

Date: December 30, 2003

To: All Network Visibility Service (NVS) and Frame Relay Customers

Subject: All NVS and Frame Relay Customers – (Product/Service) - Implementation of Intelligent Data Service Unit (IDSU)

This is to announce the implementation of the BellSouth® Intelligent Data Service Unit (IDSU) for customers who use the BellSouth® Frame Relay Service and BellSouth® NVS.

This new service includes the IDSU Customer Premises Equipment (CPE), installation of the CPE, Fault and Performance monitoring capability, and a replacement warranty if the IDSU should fail at any time as long as the customer maintains subscription to NVS and IDSU service. With IDSU Service, BellSouth will offer wholesale customers the ability to order Frame Relay Service, NVS, IDSU and installation at the same time, i.e. a complete solution via a single truck roll.

The IDSUs offered as part of this service are managed directly from the IDSU service system to provide fault and performance monitoring. These devices perform all of the functions of a standard DSU and have the added capability of providing information to a management system for fault and performance.

On December 31, 2003, this package will be posted to the BellSouth Interconnection Services' Web site. For ordering information, please click on the Web address listed below, and then click on the IDSU tab.
