Date: December 21, 2004

To: All Frame Relay Customers

Subject: ALL Frame Relay Customers – (Product/Service) - Implementation of Network Visibility Service (NVS) with Remote Message Interface

This is to announce that on December 31, 2004, BellSouth will implement Network Visibility Service (NVS) with Remote Message Interface. This interface will allow Secured Shell-Internet Protocol (SSH-IP) connectivity to the BellSouth NVS from other compatible Network Management systems for the collection of “raw data.” The customer must have SSH access to the NVS platform. Connectivity must be via Frame Relay Permanent Virtual Connection (PVC) to BellSouth’s network.

NVS with Remote Message Interface is available only for Exchange Access Frame Relay Service (XAFRS) and Managed Shared Frame Relay Service (MSFRS) Network Interfaces equipped with NVS.

The NVS with Remote Message Interface Ordering Guide will be posted to the BellSouth Interconnection Services Web site on December 31, 2004, at the address listed below:

<http://www.interconnect.bellsouth.com/guides/html/atmframe.html>

Please contact your BellSouth account team representative with any questions.

Sincerely,
