Response Deadline:	NA	Contact:	Account Team Manager

Effective June 25, 2007, AT&T Southeast Region will implement a standard service interval for activating non-channelized service channels on an existing LightGate® service (a/k/a SPA Point-to-Point).

A standard interval of seven (7) business days will to be offered to activate OC3, OC12 and OC48 channels where all points are on an existing higher level facility. To be eligible for this standard interval, facilities and equipment must be available and configured on the existing LightGate system. The following service configurations are eligible for the seven (7) business day interval:

- Customer Premises to Customer Premises
- Customer Premises to Collocation
- Collocation to Customer Premises
- Collocation to LightGate to Collocation

The Access Service Request (ASR) must be complete and accurate before it can be processed to determine its eligibility for the standard interval. Additionally, the ASR must be a request for new activity with an Application Date on or after June 25, 2007.

The following Network Channel (NC) codes are eligible:

- OB-- OC03 Non-Channelized, Non-Concatenated
- OB-R OC03 Non-Channelized, Concatenated
- OD-- OC12 Non-Channelized, Non-Concatenated
- OD-R OC12 Non-Channelized, Concatenated
- OF-- OC48 Non-Channelized, Non-Concatenated
- OF-R OC48 Non-Channelized, Concatenated

If an ASR for one of the aforementioned NC codes is not eligible for the standard interval due to a facility and/or ring exhaust condition, it will be processed under existing guidelines and a negotiated interval will be confirmed. Additional ordering requirements and service interval updates will be contained in the Guide to Interconnection and the LightGate Customer Ordering Guide posted on the AT&T Interconnection Services web site at:
