

Web Site News As Of April 09, 2007

Welcome to the Performance Measurements web site for Illinois, Indiana, Michigan, Ohio & Wisconsin.

February 2007 results are now available for Illinois, Indiana, Michigan, Ohio & Wisconsin.

Effective March 20:

Please Note:

- AT&T has determined that "act or omissions" of a CLEC led to a reported performance miss on Manual Intervention submeasures of PM 5 (FOC Timeliness) for certain CLECs in January 2007. AT&T is pursuing resolution of this issue per the terms of the applicable remedy plans in Illinois, Michigan and Ohio. While remedies are being credited/paid this month where AT&T's reported performance did not meet or exceed the standard, AT&T reserves the right to offset those amounts against future remedies due should the applicable state commissions determine that AT&T's FOC timeliness performance reported in PM 5 is excused.
- As noted here with the April 20, 2006 posting, AT&T has discovered a problem with the Affiliate results for PM 65.1 8dB Loop measurement. The number of loops identified as "in-service" in calculating the Affiliate 8dB Trouble Report Rate has been found to be overstated. While the correct volume is being identified, the following steps have been taken: 1) March 2006 through May 2006 results are reported against the Retail compare only - no Affiliate result has been generated; and 2) Remedies for February 2006 through April 2006 have been calculated against Retail only, as Affiliate performance is expected to improve once the correct volume is determined and restatement is made. Once the correct in-service volume has been determined, February and March 2006 results (and any subsequent months affected) will be restated, with any additional remedies due CLECs, or overpayments made by AT&T, handled according to the terms of the applicable remedy plan.
