

Web Site News As Of June 20, 2006

Welcome to the Performance Measurements web site for AT&T operations in Illinois, Indiana, Michigan, Ohio, and Wisconsin.

May 2006 performance results for AT&T performance measurements are now available.

Please Note:

- The June 5, 2006 Web Site News stated that April 2006 results for performance measures 5, 7.1, 13, and 13.1 in Indiana, Michigan, Ohio, and Wisconsin were recalculated and reposted to remove activity erroneously included in results as the result of a coding problem. Coding logic required to remove this activity, previously reported as UNE-P activity, from measures 13 and 13.1 is still under review, and as a consequence of this, restatement of April 2006 results for these two measures will occur at a later date.
- As noted here with the April 20, 2006 posting, AT&T has discovered a problem with the Affiliate results for PM 65.1 8dB Loop measurement. The number of loops identified as "in-service" in calculating the Affiliate 8dB Trouble Report Rate has been found to be overstated. While the correct volume is being identified, the following steps have been taken: 1) March 2006 through May 2006 results are reported against the Retail compare only – no Affiliate result has been generated; and 2) Remedies for February 2006 through April 2006 have been calculated against Retail only, as Affiliate performance is expected to improve once the correct volume is determined and restatement is made. Once the correct in-service volume has been determined, February and March 2006 results (and any subsequent months affected) will be restated, with any additional remedies due CLECs, or overpayments made by AT&T, handled according to the terms of the applicable remedy plan.
