Pre-Ordering/Ordering

1.1 Average Response Time for Manual Loop Make-Up Information

Definition:

The average time required to provide manual loop qualification for DSL capable loops measured in business days.

Exclusions:

- Manual request for loop makeup information not initiated by the CLEC
- Weekends and Holidays

Business Rules:

The time starts when a request is received from the CLEC and ends when the information on the loop qualification has been made available to the CLEC.

Levels of Disaggregation:

- None

Calculation:

$\Sigma(\text{Date and Time the Loop Qualification is made available to CLEC} - \text{Date and Time the CLEC request is received}) \div \text{Total loop qualifications}$

Report Structure:

Reported for -

- CLEC
- All CLECs
- SBC Midwest Affiliate

Measurement Type:

	IL/IN/MI/WI	OH
Tier 1	Remedied	Low
Tier 2	Remedied	Med

Benchmark:

- 2 Business Days

Deleted: . However, manual loop makeup requests initiated by the LSC as part of the ordering process when no mechanized loop qualification data is available will be included.

Deleted: ¶
For Manual requests for Loop Makeup Information initiated by the LSC as part of the ordering process, the start date and time is the receipt date and time of the good LSR. The end date and time is when the loop makeup information is available in the Loop Qual system.

1.3 Accuracy of Actual Loop Makeup Information Provided for DSL Orders

Definition:

The percent of DSL orders provisioned based upon accurate information from an SBC Midwest loop qualification response for four categories: loop length, bridge, load, repeaters. Note that the only Loop Qualification restriction on YZP/AS IS orders is Loop Length. Therefore, the YZP/AS IS Level of Disaggregation below will only measure the accuracy of LMU for Loop Length. The other three categories will be reported for Diagnostic purposes. Identification of incorrect loop qualification response will be described in the Business Rule section below.

Exclusions:

- None

Deleted: Circuits that require conditioning if originally ordered YZP or 'AS IS' based on accurate loop makeup information.¶
From the Reject Message disaggregation exclude orders that receive an FMOD Form B or Form C.

Business Rules:

This measure assesses whether SBC Midwest is able to provide a loop in response to a CLEC order that, based upon the loop qualification information provided by SBC Midwest in response to the CLEC request, correctly reflects the specifications communicated on the Loop Qualification response.

Outlined below is what will count as an inaccurate record in each criteria:

- **Loop Length:**
 - **YZP/AS IS:**
If Loop Makeup information says that the loop length is within YZP parameters (<17.5 kft), however the Loop is discovered to be outside of the parameters, SBC will count this Loop Makeup as inaccurate.
 - **Standard Ordering (Non YZP/AS IS):**
When there is a published Loop Length specification as it pertains to either SPEC code or product availability, if the inaccurate record shows loop length within the published specification, when in reality they are not, SBC will consider this an inaccurate LMU.
- **Bridge/Load/Repeater:**
 - **YZP/AS IS:**
If, during the YZP/AS IS trouble process, Load or Repeater are discovered that were not accurately reflected in Loop Qualification at that time, SBC will consider such record inaccurate. If, during the YZP/AS IS trouble process, Bridge Tap is found to be excessive that was not Excessive in Loop Makeup at that time, SBC will consider such record inaccurate.

Deleted:

Version 2.5

Formatted: Indent: Left: 228 pt, First line: 24 pt, Space After: 0 pt

Deleted: 0d

Redlined Version 2.0d for 2005 6MR Agreed-To Changes Implemented Thru February 2005

Formatted: Font: 14 pt, Bold

Formatted: Indent: Left: 108 pt, Space After: 0 pt

o **Standard Ordering (Non YZP/AS IS):**

If Loop Qualification either shows a Load or Repeater exists when it does not, causing CLEC to update SPEC code, SBC will consider such record inaccurate. If order completes, effect would be CLEC opens trouble ticket. If Loop Qualification either shows a Load or Repeater does not exist when it does, causing CLEC to update SPEC code. If order completes, CLEC would open trouble ticket.

Three activities will identify when an incorrect Loop Makeup was provided to the CLEC that inhibited provisioning of a DSL order:

- 1) A specific jeopardy will be sent (identifying the need for the CLEC to adjust the SPEC code to reflect the LMU of the loop actually available for provisioning),
- 2) An Installation trouble report will be opened (to remedy one of the four categories of loop qualification described above), or
- 3) A subsequent conditioning-only order was required for bridge, load or repeaters.

Included in the denominator are all DSL loop orders completed within the report period, along with all cancelled DSL loop orders for which a jeopardy is returned to CLECs indicating that specifications of the loop available for provisioning does not match the specifications provided on the Loop Qualification response. The numerator will include only those orders that complete without a jeopardy (as described above) being issued, without an installation trouble report (within 30 calendar days of service order completion) requiring conditioning to be added, and without a subsequent conditioning only order being required within 30 calendar days of service order completion.

The disaggregation for DSL orders that received a Reject message for fiber to the curb or PAIR GAIN/DLC found will be measured as follows: The denominator will be DSL orders completed in the reporting month and the numerator will be the DSL orders that were rejected for one of the two reasons noted above.

Levels of Disaggregation:

DSL actual Loop Makeup Information provided:

- Manually
 - o Standard Ordering (Non YZP/AS IS)
 - o YZP/AS IS Loop length only
 - o YZP/AS IS-bridge/load/repeaters (Diagnostic only)
- Electronically
 - o Standard Ordering (Non YZP/AS IS)
 - o YZP/AS IS Loop length only
 - o YZP/AS IS-bridge/load/repeaters (Diagnostic only)
- DSL Orders that received a Reject Message

2. Percent Pre-Ordering Responses Received within “X” seconds

Definition:

The percent of responses completed in “X” seconds for pre-order interfaces (WebVerigate, EDI and CORBA).

Exclusions:

- None

Business Rules:

Timestamps for the interfaces (WebVerigate, EDI and CORBA) are taken at the SBC Pre-Order Adapter and do not include transmission time through the xRAF or protocol translation times. The clock starts on the date/time when the query is received by the SBC Pre-Order Adapter and stops at the date/time the SBC Pre-Order Adapter passes the response back to the interfacing application (WebVerigate, EDI pre-order or CORBA).

The Time Searched Parameters for the pre-order transactions can be accessed in the following manner:

- [1] Go to CLEC Online, 2) Select CLEC handbook, 3) Select Handbook for Illinois, Indiana, Michigan, Ohio, Wisconsin,
- 4) Select OSS, 5) Select Operating Support Systems, 6) Select IL, IN, MI, OH, WI 7) Select Time Searched Parameters.]

Deleted:

Deleted: by function

Deleted: Choose a Midwest State

Deleted: 6

The response time is measured only within the published hours of interface availability as posted on the CLEC Online website. This information can be accessed in the following manner:

- [1] Go to CLEC Online, 2) Select CLEC Handbook, 3) Select Handbook for Illinois, Indiana, Michigan, Ohio, Wisconsin, 4) Select OSS, 5) Select Operating Hours, 6) Select OSS hours of Operation. (The spreadsheet will show both scheduled availability by Preorder Interfaces and Regional Pre-order functionally (Backend). The hours of operation are the Hours of scheduled availability within the pre-order functionality].

Deleted: Choose a Midwest State, 4) Select OSS, 5) Select Operating Hours. (The spreadsheet portion shows the interface hours while the footnote will show the processing hours for each region.)]

For the protocol translation response times, interface input times start at the time the interface receives the pre-order query request from the CLEC and the end time is when the connection is made to the SBC Pre-Order Adapter for processing. Interface output times start when the interface receives the response message back from SBC Pre-Order Adapter and the end time is when the message is sent to the CLEC.

Where CLEC accesses SBC Midwest – LEC’s systems using a non-SBC required Service Bureau Provider, the measurement of SBC Midwest – LEC’s performance shall not include Service Bureau Provider processing, availability or response time.

4. OSS Interface Availability

Definition:

Percent of time OSS interface is available compared to scheduled availability.

Exclusions:

- Where CLEC accesses SBC Midwest – LEC’s systems using a Service Bureau Provider, the measurement of SBC Midwest – LEC’s performance shall not include Service Bureau Provider processing, availability or response time.

Business Rules:

The total “number of hours functionality to be available” is the cumulative number of hours (by date and time on a 24 hour clock) over which SBC Midwest plans to offer and support CLEC access to SBC Midwest’s operational support systems (OSS) functionality during the reporting period. “Hours Functionality is Available” is the actual number of hours, during scheduled available time, that the SBC Midwest interface is capable of accepting or receiving CLEC transactions or data files for processing through the interface and supporting operational support systems (OSS). The actual time available is divided by the scheduled time available and then multiplied by 100 to produce the “Percent System Availability” measure. (SBC Midwest will not schedule normal system maintenance during normal business hours (8:00 a.m. to 5:30 p.m. central time, Monday through Friday)).

When interfaces experience partial unavailability, an availability factor is applied to the calculation of downtime. This factor is stated as a percentage and represents the impact to the CLEC. Determination of the availability factor is governed by SBC Midwest’s Availability Team on a case by case basis. Disputes related to application of the availability factor may be presented to the Commission. Whenever an interface experiences complete unavailability, the full duration of the unavailability will be counted, to the nearest minute, and no availability factor will be applied. SBC Midwest shall calculate the availability time rounded to the nearest minute.

Levels of Disaggregation:

- EBTA
- EBTA GUI
- BOP-GUI (as it is implemented in the SBC Midwest region)
- Web LEX
- EDI Ordering Protocols
- EDI VAN
- EDI SSL3
- NDM

5. Percent Firm Order Confirmations (FOCs) Returned Within “X” Hours/Days

Definition:

Percent of FOCs returned within a specified time frame from receipt of a complete and accurate service request to return of confirmation to CLEC.

Exclusions:

- Rejected (manual and electronic) service requests.
- SBC Midwest retail disconnect orders in conjunction with wholesale migrations.
- Service requests involving major Projects mutually agreed upon by CLECs and SBC Midwest or as defined as Projects on the CLEC Online website.

[The steps for access to the above Project information are: 1) Go to CLEC Online, 2) Select CLEC Handbook, 3) Choose a Midwest State, 4) Select Ordering, 5) Select Due Date Matrix, 6) Select Resale matrix or UNE matrix.]

- Where CLEC accesses SBC Midwest – LEC’s systems using a non-SBC required Service Bureau Provider, the measurement of SBC Midwest – LEC’s performance shall not include Service Bureau Provider processing, availability or response time.
- DSL orders rejected for incomplete or incorrect LSR.
- DSL orders denied for pair gain.
- Weekends and Holidays for FOCs reported in Manual Intervention disaggregations; Non-System Processing Hours for FOCs reported in Electronic/Electronic disaggregations.

Deleted: for

Business Rules:

Orders are measured according to how the LSR is processed by SBC Midwest (i.e., electronically or manually).

Deleted: service order was submitted to

Deleted: and are included in these disaggregations regardless of how they are processed.

Deleted: SBC Midwest will measure unsolicited FOCs as jeopardies.

FOC business rules are established to reflect the Local Service Center (LSC) normal hours of operation, as posted on the Internet. If the receipt time is outside of normal business hours, then the start date/time is set to the beginning of the next business day.

Electronically Submitted Requests:

FOC business rules are established to reflect the electronic normal hours of operation, as posted on the Internet. For electronically processed service requests, the start date and time is the receive date and time that is automatically populated by the interface. The end date and time is recorded by the interface and reflects the date and time the FOC is sent/made available to the CLEC.

- LSRs Received and Processed Electronically: Hours used in the calculation are the hours of system availability. Time outside of the published hours of availability is excluded from the calculation.
 - If the LSR is received during scheduled system down time, the clock starts at the first scheduled time of system availability subsequent to the receipt date/time of the LSR.
 - If the FOC is sent during a scheduled system down time, the clock stops at the first scheduled time of system availability subsequent to the date/time the FOC was sent/made available to the CLEC.
 - If both the LSR is received and the FOC is sent within a continuous uninterrupted down-time period and entirely outside the published hours of availability, the receipt to FOC interval will be one minute.

Manually Submitted and/or Manually Processed Requests:

Manual requests are those initiated via the CLEC by fax. Manually processed requests include those manually submitted plus those electronically submitted that require manual intervention. The receive date and times are recorded and input on each request in the ordering system for each FOC opportunity. The end times are the dates and times the FOCs are sent back to the CLEC.

- Hours used in the calculation are the Local Service Center (LSC) hours of operation.
 - Where If a request is received Monday through Friday between 7:00 a.m. to 5:00 p.m., the valid start time will be the actual receipt time.
 - If the request is received Monday through Thursday after 5:00 p.m. and before 7:00 a.m. the next day, the valid start time will be the next business day at 7:00 a.m.
 - If the request is received Friday after 5:00 p.m. and before 7:00 a.m. Monday, the valid start time will be at 7:00 a.m. Monday.
 - If the request is received on a holiday (anytime), the valid start time will be the next business day at 7:00 a.m.
 - The returned confirmation to the CLEC will establish the end date/time. Where disaggregations reflect “clock hours” a 24-hour rolling clock will be used between 12:00 a.m. Monday and 11:59 p.m. Friday. Where disaggregations reflect “business hours” the time will be measured from 7:00 a.m. to 5:00 p.m. Monday through Friday CST.

When related LSR's are submitted the FOC clock will start with the receipt of the last related LSR (date/time), and will be based on the disaggregation with the longest FOC duration for any of the related LSR's. When a Related LSR is rejected the FOC clock for all Related LSRs will start with receipt of the SUP or last related LSR, whichever is later.

Formatted: Indent: Left: 228 pt, First line: 24 pt, Space After: 0 pt

Deleted: 0d

Redlined Version 2.0d for 2005 6MR Agreed-To Changes Implemented Thru February 2005

Formatted: Font: 14 pt, Bold

Formatted: Indent: Left: 108 pt, Space After: 0 pt

Orders for the Broadband Service product are included in the disaggregated measures.

For a manual request that requires an associated loop qualification, the Start date and time is when the loop qualification is completed by OSP Engineering and is made available in the Loop Qual system. The End date and time is when the fax is sent back to the CLEC.

For orders where FOC times are negotiated with the CLEC, the entry on the service order is used in the calculation. The request type is determined from the order class and order type tables to report the various levels of disaggregation.

Deleted: ACIS

For DSL orders that require manual loop makeup information after the receipt of the LSR (CLEC did not request manual loop makeup information), the Start time for the FOC is the date and time the loop makeup information is available in the Loop Qual system. The End date and time is automatically recorded by the interface and reflects the date and time the FOC is sent/made available to the CLEC.

Manually and Electronically Submitted Requests:

For Interconnection Trunk Orders, SBC Midwest will attempt to contact CLEC with questions on interconnection trunk orders at least 2 days prior to FOC due date. This process will be in place until SBC Midwest institutes a reject process for these type orders.

Levels of Disaggregation:

Electronic/Electronic (Received and processed without Manual intervention)

- All electronic/electronic
- Resale (residential and simple business combined)
- UNE-P (POTS loop/port combinations)
- UNE loop (excluding DSL loops), with or without LNP
- DSL capable loops (including standalone loops, and line sharing)
- LNP only
- All other

Manual Intervention (Required Manual processing, regardless how received)

- Resale (residential and simple business combined)
- UNE-P (POTS loop/port combinations)
- UNE loop (excluding DSL loops), with or without LNP
- DSL capable loops (including standalone loops, and line sharing)
- LNP only

7.1 Percent Mechanized Completions Sent/Made Available Within One Day Of Work Completion

Definition:

Percent mechanized completions sent/made available within one day.

Exclusions:

- Where CLEC accesses SBC Midwest – LEC’s systems using a non-SBC required Service Bureau Provider, the measurement of SBC Midwest – LEC’s performance shall not include Service Bureau Provider processing, availability or response time.
- CLEC-caused misses and delays

Business Rules:

Days are calculated by subtracting the date the completion notification was sent/made available to the CLEC minus the work completion date for LSR orders. The calculation is based on LSC business days. This information can be found as follows:

1) Go to CLEC Online, 2) Select CLEC Handbook, 3) Choose a Midwest State, 4) Select OSS, 5) Select Operating Hours. (The spreadsheet portion shows the interface hours while the footnote will show the processing hours for each region.)

Levels of Disaggregation:

- All (The total of the 5 disaggregations below.)
- Resale
- UNEs
- UNE-P
- LNP Only
- Other

Calculation:

(# of mechanized completions sent/made available to the CLEC within 1 day of work completion ÷ total mechanized completions) * 100

9. Percent Rejects

Definition:

The number of rejects compared to the issued orders for orders submitted via the electronic interfaces

Exclusions:

- Where CLEC accesses SBC Midwest – LEC’s systems using a non-SBC required Service Bureau Provider, the measurement of SBC Midwest – LEC’s performance shall not include Service Bureau Provider processing, availability or response time.
- Service requests involving major projects mutually agreed upon by CLECs and SBC Midwest or as defined as Projects on the CLEC Online website.

[The steps for access to the above Project information are: 1) Go to CLEC Online, 2) Select CLEC Handbook, 3) Choose a Midwest State, 4) Select Ordering, 5) Select Due Date Matrix, 6) Select Resale matrix or UNE matrix.]

Business Rules:

A rejected order does not pass edit checks or other edits prior to the order being distributed. This measure includes all orders that are submitted through an electronic interface, regardless of whether the order was processed electronically or manually.

Levels of Disaggregation:

- CLEC Caused Reject
- SBC Midwest Caused Rejects (Re-flowed Orders)

Calculation:

(# of rejects ÷ total unique orders and supplements for electronic interfaces) * 100

Report Structure:

Reported for -

- CLEC
- All CLECs
- SBC Midwest Affiliate

Measurement Type:

Tier 1 – None

Tier 2 – None

10. Percent Rejects Returned Within “X” Hours

Definition:

Percent rejects returned within “X” Hours.

Exclusions:

- Where CLEC accesses SBC Midwest – LEC’s systems using a non-SBC required Service Bureau Provider, the measurement of SBC Midwest – LEC’s Performance shall not include Service Bureau Provider processing, availability or response time.
- Service requests involving major projects mutually agreed upon by CLECs and SBC Midwest or as defined as Projects on the CLEC Online website.

[The steps for access to the above Project information are: 1) Go to CLEC Online, 2) Select CLEC Handbook, 3) Choose a Midwest State, 4) Select Ordering, 5) Select Due Date Matrix, 6) Select Resale matrix or UNE matrix.]

Business Rules:

The start time used is the date and time the LSR is received. The end time is the date and time the reject notice is sent/made available to the CLEC. This measure includes all rejects regardless of how the order was initially submitted or processed (i.e., electronically or manually). The calculation is based on system processing hours for auto/auto and LSC processing hours for auto/manual and manual/manual.

When a Related LSR is rejected, and a SUP is not received in four business hours, the remaining related LSRs will be rejected. The Reject start time for the remaining Related LSRs is the Reject time of the initial Rejected LSR plus four business hours.

Levels of Disaggregation:

- Mechanized Rejects (A/A)
- Manual Rejects Received Electronically (A/M)
- Manual Rejects Received Manually (M/M)

Calculation:

(# of rejects sent/made available within “X” Hours ÷ total rejects) * 100

13. Order Process Percent Flow Through

Definition:

Percent of orders from receipt to distribution that progress mechanically through to SBC Midwest provisioning systems.

Exclusions:

- Orders both electronically generated and rejected.
- Manually received orders
- Where CLEC accesses SBC Midwest – LEC’s systems using a non-SBC required Service Bureau Provider, the measurement of SBC Midwest – LEC’s performance shall not include Service Bureau Provider processing, availability or response time.

Business Rules:

The number of eligible orders, that flow through SBC Midwest’s ordering systems without manual intervention, divided by the total number of eligible electronically generated orders within the reporting period. Manually intervened orders that are electronically generated are considered failed pass-through. Orders that fall out after receipt, but are not rejected back to CLEC due to CLEC caused errors, will be included as failed pass-through occurrences. This measure is based on orders designed to flow through.

Levels of Disaggregation:

- UNE Loops (includes Loop with LNP, LNP, and LSNP with all other UNE Loops)
- UNE-P
- Other (Resale, Line Sharing and any other products not reported in UNE Loops and UNE-P)

Calculation:

(# of orders that flow through ÷ total eligible electronic orders) * 100

MI 2. Percentage of Orders Given Jeopardy Notices Within 24 Hours of the Due Date

Definition:

Percentage of Orders Given Jeopardy Notices within 24 hours of the Due Date measures the percentage of 870s sent less than 24 hours (1 day) prior to the due date.

Exclusions:

- CLEC/End User Initiated Jeopardy Codes.
- Weekends and Holidays
- Orders that fall into, or are completed thru, the FMOD process
- Orders received from CLEC and due on same day from the numerator.
- Jeopardy Notices sent on or after the due date.
- Earlier offered due dates for NFW orders only.

Formatted: Bullets and Numbering

Business Rules:

An 870 is a jeopardy notice that is sent to the CLEC to notify them that an order's due date is in jeopardy of being missed. Consider "24 hours" as 1 day. The measure is calculated using business days only (i.e., Monday-Friday). Unsolicited FOCs will be counted as Jeopardies. The calculation is based on 870 notices sent during system processing hours. The response time is measured only within the published hours of interface availability as posted on the CLEC Online website.

[This information can be accessed in the following manner:

1) Go to CLEC Online, 2) Select CLEC Handbook, 3) Choose a SBC Midwest State, 4) Select OSS, 5) Select Operating Hours. (The spreadsheet portion shows the interface hours while the footnote will show the processing hours for each region.)]

Any jeopardy notification that cannot be definitively determined as not being sent prior to 24 hours before the due date, on or between, or after the due date, is included in the numerator.

Levels of Disaggregation:

- Resale POTS
 - Field Work (FW)
 - Non-Field Work (NFW)
- Resale Specials
 - Field Work (FW)

MI 13. Percent Mechanized Line Loss Notifications Returned Within One Day Of Work Completion

Definition:

Percent mechanized line loss notifications returned within one business day of the completion of work.

Exclusions:

- Line Loss Notifications that are delayed due to a CLEC cause that prevents SBC Midwest from completing the order and thus sending the line loss notification.

Business Rules:

Days are calculated by subtracting the date the line loss notification was sent/made available to the losing CLEC from the work completion date. The date that the last service order associated with the winning carrier’s service request is provisioned is the work completion date. The calculation is based on business days, using a full 24-hour day.

This measure includes all product/ordering scenarios for which loss notifications are to be sent according to the information documented on the CLEC OnLine website, including retail winbacks.

Where CLEC accesses SBC Midwest – LEC’s systems using a non-SBC required Service Bureau Provider, the measurement of SBC Midwest – LEC’s performance shall not include Service Bureau Provider processing, availability or response times.

Levels of Disaggregation:

- All (combination of two disaggregations below)
- SBC Winback (SBC Retail is the “winning” carrier, CLEC is losing carrier)
- CLEC-to-CLEC (CLEC A is “winning” carrier, CLEC B is “losing” carrier)

Calculation:

(# of mechanized line loss notifications returned to the losing CLEC within 1 day of work completion ÷ total line loss notifications) * 100

CLEC WI 1 Average Delay in Original FOCs Due Dates Due to Delay Notices (Issue F)

Definition:

Measures average amount of delay from original FOC due dates to the date of actual completion for all orders that receive delay notices.

Exclusions:

- Weekends and Holidays
- The portion of the delay caused by the CLEC (i.e. waiting for the CLEC response.) This is time from when SBC sends Form C to the CLEC until the CLEC responds.

Business Rules:

Average Delay is measured from original FOC due date to the actual completion date.

16. Percent of Usage Records Transmitted Correctly

Definition:

The percent of usage records transmitted correctly on the Daily Usage extract feed.

Exclusions:

- CLEC-caused errors.

Business Rules:

Controls and edits within the billing process uncover certain types of errors that are likely to appear on the usage records. When these errors are uncovered, a new release of the program is written to ensure that the error does not occur again. Thus, an error that is reported in one month should not occur the next month because the billing program error would have been fixed by the next month. The usage records retransmitted due to SBC Midwest caused errors are counted in this measure.

17.1 Post to Bill Notification Timeliness

Definition:

Percent of Post to Bill notices that are sent within 8 days of completion of the last service order associated with an LSR in the ordering system.

Exclusions:

- Orders for which billing completion notices are not sent.
- Access Service Orders billed through CABS
- Interconnection Trunk Orders

Deleted: ¶

Business Rules:

For OSS versions that generate Post to Bill notifications (“PTBs”), the process to generate the PTB is initiated after the service order is posted in the Billing system. PTB timeliness is measured, for each PTB sent, from service order completion in the Ordering system to the time that the billing completion notification is sent/made available to the CLEC. Where CLEC accesses SBC/Ameritech – LEC’s systems using a Service Bureau Provider, the measurement of SBC/Ameritech – LEC’s performance shall not include Service Bureau Provider processing, availability or response time.

Levels of Disaggregation:

18. Billing Timeliness (Wholesale Bill)

Definition:

Billing Timeliness measures the length of time from the wholesale billing date (end of billing period) to the time it is transmitted to the CLEC.

Exclusions:

- Weekends and Holidays.

Business Rules:

The date sent is used to gather the data for the reporting period. The measure compares the date sent for the bill to the send due date. The send due date is six business days after the wholesale bill period. For example, a CLEC with a wholesale billing date of Monday the 1st, the transmission due date would be on the following Monday, the 8th assuming no weekday holidays.

Levels of Disaggregation:

- Electronic.
- Paper

Calculation:

(# of bills transmitted on time ÷ total bills released) * 100

Report Structure:

Reported for -

- CLEC
- All CLECs
- SBC Midwest Affiliate

Measurement Type:

	IL/IN/MI/WI	OH
Tier 1	Remedied	Low
Tier 2	Remedied	High
	Subject to a Remedy Cap	

Benchmark:

- 95% within 6th workday for IL, IN, MI, OH, WI.

19. Daily Usage Feed Timeliness

Definition:

Usage information is sent to the CLECs on a daily basis. This usage data must be sent to the CLEC within 6 work days in order to be considered timely.

Exclusions:

- Weekends and Holidays.

Business Rules:

The measure uses the actual EMI usage records that are sent to the CLECs. Data date is the recording date of the usage and is part of the EMI usage record. Cycle date is the day the Daily Usage file is sent to the CLEC. Cycle date is found on the pack header record of the Daily Usage file.

Levels of Disaggregation:

- None

Calculation:

(# of usage records transmitted on time ÷ total usage records) * 100

Report Structure:

Reported for -

- CLEC
- All CLECs
- SBC Midwest Affiliate

Measurement Type:

Tier 1 – None

Tier 2 – None

Benchmark:

- 95% within 6th workday

Deleted: 125. Percent Matching UNE-P Provisioning & Billing DB Records¶

¶
Definition:¶
Percent of UNE-P circuit-level ACIS CSR records with posted service order activity that would generate a monthly recurring charge, that match the corresponding UNE-P circuit level CABS billing records. ¶

Exclusions:¶
Circuits with pending UNE-P service order activity between ACIS and CABS as of the end of the reporting month (posted to ACIS but not yet posted to CABS) where the activity is unposted to CABS for less than 30 calendar days from the completion date will be excluded from the test sample. ¶
UNE-P orders/circuits that post to ACIS but are not designed to post to CABS (e.g. Directory Listings updates). ¶
UNE-P orders/circuits that post to billing in CABS but are not designed to post to the ACIS CSR (e.g., UNE loops, interconnection trunks). ¶

Business Rules:¶
A statistically valid sample of circuit-level billable provisioning records updated in, or added to, ACIS in the report month will be compared to the corresponding recurring billing record updated in, or added to, CABS. The comparison will assess all updates to CABS for UNE-P services and/or features that generate monthly recurring charges. The statistically valid sample will be established from the total number of UNE-P service orders that process from ACIS to CABS in the reporting month. The number of records compared will be sufficient to assure 95% confidence in the test result. ¶

¶
If any of the bill-affecting services and/or features do not match when the ... [14]

126. Bill Accuracy

Definition:

The percent of the total amount due for the current bill period that does not result from adjustment for billing errors that occurred in a prior bill period.

Exclusions:

- None

Business Rules:

The scope of this PM includes all Local and Collocation CLEC bills generated from the CABS billing system. The denominator consists of the total amount due for the current bill period (excludes past due amounts) from each CLEC bill. The denominator includes the impact of all adjustments, credit or debit, that are on the bill. The numerator consists of the denominator less the absolute value of those adjustments applied to correct for billing errors that occurred in previous bill periods. Adjustments applied that reflect correct billing, rather than corrections to prior billing error, will be reported as correct billing and will be included in the numerator.

This PM will be reported 3 months in arrears to allow for the completion of reviews and categorizations of data prior to releasing results. These reviews and categorizations will require human involvement. As an example, January results would be reported in May, three months later (“in arrears”) than January results for other performance measures, which are reported in February.

Where a correction for a billing error requires issuance of offsetting debit and credit adjustments on the bill, the net impact of these offsetting adjustments will be applied. The absolute value of the net impact will be deducted from the numerator.

Levels of Disaggregation:

- None

Calculation:

$(\text{Total amount due for current bill period} - \Sigma(\text{absolute value(dollar value of individual adjustments due to billing errors)}) \div \text{total amount due}) * 100$

Report Structure:

Reported for -

- CLEC
- All CLECs

CLEC BLG-3 **Percent of Billing Claim Resolution Notifications Sent/Made Available within 30 Business Days**

Definition:

Measures the percent of time that SBC Midwest sends/makes available claims resolution notifications to the CLEC within 30 business days of receipt by SBC Midwest.

Exclusions:

- Claims on invoices greater than 4 months old
- Rejected Claims
- Duplicate Claims
- Claims received on non-standard forms
- Holidays and weekends
- JEP Time
- Excludes Access and LSB Billing claims

Exclusion definitions are detailed on CLEC Online and can be found in the Billing Adjustments and Claims section of the CLEC Online Handbook at <https://clec.sbc.com/clec/hb/>.

Business Rules:

The purpose of this measure is to track the percentage of billing claims resolution notifications sent/made available within 30 business days. Day of receipt (not date of acknowledgement) shall be considered Day zero (0) for computing resolution performance. The end time is the date the resolution is sent to the CLEC via email or the day the acknowledgment is posted to the website for claims sent through the Electronic Exchange of Claims (ExClaim) on-line application. These acknowledgements are made available through the ExClaim batch process and can be viewed by the CLEC the next business day.

Any valid Local claims sent to the e-mail address of AICS-TC.Billing@Ameritech.com or through ExClaim will be included. Any claims that are incorrectly sent to this e-mail address will be rejected.

Any valid Collocation claims sent to the e-mail address of AITCBLCL@txmail.sbc.com or through ExClaim will be included. Any claims that are incorrectly sent to this e-mail address will be rejected.

22. Local Service Center (LSC) Grade Of Service (GOS)

Definition:

Percent of calls answered by the Local Service Center (LSC) within 20 seconds.

Exclusions:

- Weekends and Holidays.

Business Rules:

The clock starts when the customer enters the queue and the clock stops when a SBC Midwest representative answers the call. The speed of answer is determined by measuring and accumulating the elapsed time from the entry of a CLEC customer call into the SBC Midwest call management system queue until the CLEC customer call is transferred to SBC Midwest personnel assigned to handling CLEC calls for assistance. Data is accumulated from 12:00 a.m. on the first calendar day to 11:59 p.m. on the last calendar day of the month for the reporting period. LSC hours of operation are posted on the Internet.

Levels of Disaggregation:

- Resale

Deleted: &

Business Rules:

Includes trouble reports received the day that SBC Midwest personnel complete the service order through 30 calendar days after completion. The denominator for this measure is the total count of orders posted within the reporting month. However, the denominator will at a minimum be equal to the numerator. The numerator is the number of trouble reports received on or within 30 calendar days after service order completion and closed within the reporting month. This will include troubles taken on the day of completion found to be as a result of a UNE-P conversion.

46. Percent Trouble Reports Within 30 Days (I-30) of Installation

Definition:

Percent of N, T, and C orders by circuit that receive a network customer trouble report within 30 calendar days of service order completion.

Exclusions:

- UNE and Interconnection Trunks.
- Orders that are not N, T, or C.
- All disposition “11”, “12”, “13” and “14” trouble reports (excludable reports)
- Official Company Services from Retail.
- Trouble report received on the due date before service order completion.
- Trouble reports that are coded to Customer Premise Equipment (CPE), Interexchange Carrier/Competitive Access Provider, and Informational
- Subsequent reports. A subsequent report is a repair report that is received while an existing repair report is open on the same number.

Formatted: Bullets and Numbering

Business Rules:

A trouble report is counted if it is flagged in WFA (Work Force Administration) as a trouble report that had a service order completion within 30 calendar days. It cannot be a repeat report and must be a measured report. The order flagged against must be an addition in order for the trouble report to be counted. Specials are selected based on a specific service code off of the circuit ID.

The denominator for this measure is the total count of orders by circuit posted within the reporting month. However, the denominator will at a minimum be equal to the numerator. The numerator is the number of trouble reports received within 30 days after service order completion and closed within the reporting month.

47. Percent SBC Midwest Missed Due Dates Due To Lack Of Facilities

Definition:

Percentage of N, T, and C orders by circuit with missed committed due dates due to lack of facilities.

Exclusions:

- UNE and Interconnection Trunks.
- Orders that are not N, T, or C.
- Official Company Services from Retail.

Formatted: Bullets and Numbering

Business Rules:

Includes orders with a completion date that is greater than the due date based on an SBC Midwest missed reason code for lack of facilities. This measurement is reported at a circuit level for all specials. Count any unsolicited FOC which modifies the due date as a missed due date.

53. Percent Repeat Reports

Definition:

Percentage of network customer trouble reports received within 30 calendar days of a previous customer report.

Exclusions:

- UNE and Interconnection Trunk
- Trouble reports coded to Customer Premise Equipment, Interexchange Carrier/Competitive Access Provider, and Informational
- All disposition "11", "12", "13" and "14" trouble reports (excludable reports)
- Official Company Services from Retail

Formatted: Bullets and Numbering

Business Rules:

Includes customer trouble reports received within 30 calendar days of an original customer report. When the second report is received in 30 days, the original report is marked as an Original of a Repeat, and the second report is marked as a Repeat. If a third report is received within 30 days, the second report is marked as an Original of a Repeat as well as being a Repeat, and the third report is marked as a Repeat. In this case there would be two repeat reports. If either the original or the second report within 30 days is a measured report, then the second report counts as a Repeat report.

Unbundled Network Elements (UNEs) - Provisioning

Deleted: ¶

Deleted: §

55. Average Installation Interval

Definition:

Average business days from application date to completion date for N, T, and C orders. The "X" business days is determined based on quantity of UNE loops ordered and the associated standard interval.

Exclusions:

- Resold Specials and Interconnection Trunks.
• UNE-P captured in the POTS or Specials measurements.
• Orders that are not N, T, or C.
• CLEC requested due dates greater than "X" business days as set out below.
• CLEC caused and/or end-user caused misses.
• Orders included in Measure 55.2
• CFA expedites
• Orders where the requested due date is greater than the standard/offered installation interval.
• Service requests involving major projects mutually agreed upon by CLECs and SBC Midwest or as defined as Projects in CLEC Online.

[The steps for access to the above Project information are: 1) Go to CLEC Online, 2) Select CLEC Handbook, 3) Choose a SBC Midwest State, 4) Select Ordering, 5) Select Due Date Matrix, 6) Select Resale matrix or UNE matrix.]

Business Rules:

The Application Date is the day that SBC Midwest receives the customer initiated service request. The Completion Date is the day that SBC Midwest personnel complete the service order activity. The base of items is out of WFA (Work Force Administration).

If an order is completed on a Saturday, Sunday, or Holiday, SBC Midwest will include that day in the calculation of interval.

For DSL Loop Orders: The Application Date is the day that the CLEC authorizes SBC Midwest to provision the DSL based on the loop qualification. If the loop qualification

determines that no conditioning is required, SBC Midwest will initiate the service order when the loop qualification is returned from SBC Midwest engineering which will also be the application date. If conditioning is required, SBC Midwest will reject the order back to the CLEC and wait for a supplement from the CLEC notifying SBC Midwest of the appropriate action to take. If the CLEC supplements the DSL order, SBC Midwest will issue the order and the application date will be the date that SBC Midwest receives the supplement. The Completion Date is the day that SBC Midwest personnel complete the service order activity. The base of items is out of WFA (Work Force Administration) and it is reported at a circuit level. If an order is completed on a Saturday, Sunday, or Holiday, SBC Midwest will include that day in the calculation of interval.

55.2 Average Installation Interval for Loop With LNP

Definition:

Average business days from the receipt of an accurate LSR to completion date for N, T, and C orders excluding customer caused misses and customer requested due date greater than “X” business days. The “X” business days is determined based on quantity of UNE loops ordered and the associated standard interval.

Exclusions:

- Resold Specials and Interconnection Trunks
- UNE-P captured in the POTS or Specials measurements
- Orders that are not N, T, or C
- Customer requested due dates greater than “X” business days. X is defined as follows:

	Std. Interval	“X” Days
Non-CHC Excluding FDT		
o Loop with LNP (1-10) – 3 days		4 days
o Loop with LNP (11-20) – 7 days		8 days
o Loop with LNP (21+) – 10 days		11 days
CHC		
o Loop with LNP (1-10) – 5 days		6 days
o Loop with LNP (11-20) – 7 days		8 days
o Loop with LNP (21-24) – 10 day		11 days
FDT		
o Loop with LNP (1-10) – 5 days		6 days
o Loop with LNP (11-20) – 7 days		8 days
o Loop with LNP (21-24) – 10 days		11 days

- CLEC caused and/or end-user caused misses
- NPAC caused delays unless caused by SBC Midwest
- Orders where CLECs are charged expedite charges
- Service requests/order involving major projects mutually agreed upon by CLECs and SBC Midwest. For Loop with LNP, a project is defined as >100 lines, circuits and/or telephone numbers.

Business Rules:

The start time is the date of the receipt of an accurate LSR. The Completion Date is the day that SBC Midwest personnel complete the service order activity. From an interval perspective, an LSR received before 3PM is considered to be received on that day, an LSR received after 3PM is

56. Percent Installations Completed Within Customer Requested Due Date

Definition:

Percent installations completed within customer requested due date when that date is later than or equal to the standard offered interval as defined in the CLEC manual or, if expedited (accepted or not accepted), the date agreed to by SBC Midwest.

Exclusions:

- Resold Specials and Interconnection Trunks.
- UNE-P captured in the POTS or Specials measurements.
- Orders that are not N, T, or C.
- CLEC caused and/or end-user caused misses.
- Orders where CLECs are charged expedite charges
- Orders included in Measurement 56.1
- Facility misses counted in PM 60.

Business Rules:

The Application Date is the day that SBC Midwest receives the customer initiated service request. The Completion Date is the day that SBC Midwest personnel complete the service order activity. The base of items is out of WFA (Work Force Administration).

If an order is completed on a Saturday, Sunday, or Holiday, SBC Midwest will include that day in the calculation of interval.

56.1 Percent Installations Completed Within the Customer Requested Due Date for Loop With LNP

Definition:

Percent installations completed within the customer requested due date when that date is greater than or equal to the standard offered interval as defined in the CLEC manual or, if expedited (accepted or not accepted), the date agreed to by SBC Midwest.

Exclusions:

- Resold Specials and Interconnection Trunks.
- UNE-P captured in the POTS or Specials measurements.
- Orders that are not N, T, or C.
- CLEC caused and/or end-user caused misses.
- NPAC caused delays unless caused by SBC Midwest.

Business Rules:

The start time is the date of the receipt of an accurate LSR. The Completion Date is the day that SBC Midwest personnel complete the service order activity. If the CLEC submits the LSR prior to 3:00 p.m. the CLEC may request a 3-day interval. If the LSR is submitted after 3:00 p.m. the CLEC can request a 4-day interval. The base of items is out of WFA (Work Force Administration) and it is reported at an order level to account for different measurement standards based on the number of circuits per order.

Levels of Disaggregation:

- Aggregate
 - Loop with LNP (1-10)

58. Percent SBC Midwest Caused Missed Due Dates

Definition:

Percentage of items where installations are not completed by the negotiated due date.

Exclusions:

- Resold Specials and Interconnection Trunks.
- UNE-P captured in the POTS or Specials measurements.
- Orders that are not N, T, or C.
- CLEC caused misses excluded from the numerator.
- Orders included in CLEC WI 11 – FMOD Forms B, C, D Percentage of Due Dates Met
- Facility misses counted in PM 60.

Business Rules:

This includes items completed after the Due Date, due to a SBC Midwest reason. This measurement is reported at a circuit level for all UNEs. Count any unsolicited FOC which modifies the due date as a missed due date.

The number of items on orders canceled after a SBC Midwest-caused missed due date is included in both the numerator and denominator

59. Percent Trouble Reports Within 30 Days (I-30) of Installation,

Definition:

Percentage of UNE items that receive a network customer trouble report within 30 calendar days of service order completion.

Exclusions:

- Resold Specials and Interconnection Trunks.
- Trouble tickets coded to CPE, Interexchange Carrier/Competitive Access Provider, and Information reports.
- UNE-P captured in the POTS or Specials measurements.
- Orders that are not N, T, or C.
- PTRs as defined in PM 115.1
- Excludes DSL (Line Share/No Line Share) > 12k ft with load coils, repeaters, and/or excessive bridged taps (as indicated on the loop qual) for which the CLEC has not authorized conditioning and those load coils, repeaters and bridged taps are determined to be the cause of the trouble.
- Subsequent reports. A subsequent report is a repair report that is received while an existing repair report is open on the same circuit.
- Official Company Services from Retail
- All troubles with disposition codes of "11", "12", "13" and "14" (excludable reports)

Formatted: Bullets and Numbering

Business Rules:

A trouble report is counted if it is received within 30 calendar days of a service order completion. The service order which generated the report must be an "add" in order for the trouble report to be counted. UNEs are selected based on a specific service code off of the circuit ID. This measurement is reported at a circuit level for all UNEs. The denominator for this measure is the total count of orders by circuit posted within the reporting month. However, the denominator will at a minimum be equal to the numerator. The numerator is the number of trouble reports received on or within 30 days after service order completion and closed within the reporting month.

WI 1 Percent No Access – UNE Loops Provisioning

Definition:

Percent of Field Work (FW) orders with a status of “No Access.”

Exclusions:

- CLEC caused misses. (customer requests later date, other customer reasons, - customer not ready).
- All orders that are not N, T, or C.
- No Field Work.

Business Rules:

SBC Midwest personnel set the “No Access” indicator when access cannot be obtained to the customer’s premises. Order must be Completed.

Levels of Disaggregation:

- Geographic

Calculation:

(# of orders that are No Access ÷ Total Field Work orders) * 100

WI 9 Percent Facility Modification Orders

Definition:

Percentage of orders requiring Facility Modification Delay Notification (Form A)

Exclusions:

- Orders not requiring Facility modification notification. (FMOD Form A)

Business Rules:

The total number of orders requiring facility modification delay notification (Form A) reflected as a percentage of all orders completed in the period.

This measure assesses the percent of total orders that are processed through the Facilities Modification Process established through collaborative efforts. The formal policy is available on the SBC CLEC OnLine web site within the CLEC Handbook section, under Ordering as the UNE Ordering Facility Modification & Construction. The formal policy identifies that the Facilities Modification Process is started only by the transmission of a Form A to the CLEC.

(DSL with Lineshare orders do not utilize the FMOD process.)

IN 1 Percent Loop Acceptance Testing (LAT) Completed on or Prior to the Completion Date

Definition:

Percent Loop Acceptance Test (LAT) completed on or prior to the completion date of the order.

Exclusions:

- Orders where LAT not requested
- LAT requests when the CLEC is not authorized to seek LATs
- Orders where CLEC causes delay in the LAT

Business Rules:

Loop Acceptance Test is where a SBC Midwest Technician (Frame/Field as appropriate) is requested via an LSR to complete a Loop Acceptance Test. Loop Acceptance Test is completed on or before order completion date. The SBC Midwest Technician will contact the CLEC via the LOC. The Tech will complete a series of tests with the CLEC to validate continuity of the loop for acceptance by the CLEC.

This measure will include canceled orders where

- the LAT was completed and the CLEC chose not to accept the loop
- the cancel was due to an SBC Midwest cause after the due date but prior to the LAT

Levels of Disaggregation:

- DSL Loops without Line Sharing

Calculation:

(Orders where LAT was requested and performed on or before the Completion Date ÷ Total # of Orders where LAT was requested)*100

Unbundled Network Elements (UNEs) - Maintenance

65.1 Trouble Report Rate Net of Installation and Repeat Reports

Definition:

The number of customer trouble reports exclusive of installation and repeat reports within a calendar month per 100 UNEs.

Exclusions:

- Resold Specials .
- UNE-P captured in the POTS or Specials measurements.
- Trouble tickets coded to CPE, Interexchange Carrier/Competitive Access Provider, and Information reports.
- PTRs as defined in PM 115.1.
- Trouble reports counted in PM 59 or PM 69.
- Excludes DSL (Line Share/No Line Share) > 12k ft with load coils, repeaters, and/or excessive bridged taps (as indicated on the loop qual) for which the CLEC has not authorized conditioning and those load coils, repeaters and bridged taps are determined to be the cause of trouble.

• Official Company Services from Retail

• All troubles with disposition codes of "11", "12", "13" and "14" (excludable reports)

Formatted: Bullets and Numbering

Business Rules:

Repair reports are tracked by trouble ticket type. Reports are counted in the month they close.

66. Percent Missed Repair Commitments

Definition:

Percentage of trouble reports not cleared by the commitment time due to SBC Midwest reasons.

Exclusions:

- Resold Specials and Interconnection Trunks.
- All UNE-P (other than 8dB loops) captured in the POTS or Specials measurements.
- Non-measured reports (CPE, Interexchange, and Information reports).
- No Access Time for Wholesale and No Access tickets for Retail.
- CLEC extended commitments.
- Official Company Services from Retail
- All troubles with disposition codes of “11”, “12”, “13” and “14” (excludable reports)

Formatted: Bullets and Numbering

Business Rules:

The commitment time for UNEs is defined as 24 hours. If the cleared date and time minus the receive date and time > 24 hours, it counts as a trouble report that missed the repair commitment. UNEs are selected based on a specific service code off of the circuit ID. Reports are counted the month they are closed.

For retail tickets the commitment time is the commitment given to the customer.

69. Percent Repeat Reports

Definition:

Percentage of network customer trouble reports received within 30 calendar days of a previous customer trouble report.

Exclusions:

- Resold Specials.
- Trouble tickets coded to CPE, Interexchange Carrier/Competitive Access Provider, and Information reports.
- Official Company Services from Retail
- All troubles with disposition codes of "11", "12", "13" and "14" (excludable reports)
- PTRs as defined in PM 115.1.
- UNE-P captured in the POTS or Specials measurements.
- Excludes repeat troubles where the original customer report was excluded in PM 59.

Formatted: Bullets and Numbering

Business Rules:

Includes customer trouble reports received within 30 calendar days of an original customer report. When the second report is received in 30 days, the original report is marked as an Original of a Repeat, and the second report is marked as a Repeat. If a third report is received within 30 days, the second report is marked as an Original of a Repeat as well as being a Repeat, and the third report is marked as a Repeat. In this case there would be two repeat reports. If either the original or the second report within 30 days is a measured report, then the second report counts as a Repeat report.

Interconnection Trunks

70. Percentage of Trunk Blockage (Call Blockage)

Definition:

Percentage of calls blocked on outgoing traffic from SBC Midwest end office to CLEC end office and from SBC Midwest tandem to CLEC end office.

Exclusions:

- Weekends and Holidays
- If CLECs have trunks busied-out for maintenance at their end, or if they have other network problems which are under their control.
- SBC Midwest is ready for turn-up on Due Date and CLEC is not ready or not available for turn-up of trunks.
- If CLEC does not take action upon receipt of Trunk Group Service Request (TGSR) or ASR within 3 days when a Call Blocking situation is identified by SBC Midwest or in the timeframe specified in the ICA.
- If CLEC does not take action upon receipt of TGSR/ASR within 10 business days when a pre-service of 75% or greater occupancy situation is identified by SBC Midwest or in the time frame specified in the ICA.
- If CLEC fails to provide a forecast within the most recent 6 months..
- If CLEC's actual trunk usage, as shown by SBC Midwest from traffic usage studies, is more than 25% above CLEC's most recent forecast, which must have been provided within the last six-months unless a different timeframe is specified in an interconnection agreement.
- New trunk groups that have not been in service for three months may be excluded from calculations for that 3 month period. Nevertheless, utilization data will be gathered upon the turn-up of the Trunk Group.
- Any calls blocked due to a CLEC cause other than those listed in the exclusions above.

Deleted: ¶

Formatted: Bullets and Numbering

The exclusions do not apply if SBC Midwest fails to timely provide CLEC with traffic utilization data reasonably required for CLEC to develop its forecast or if SBC Midwest refuses to accept CLEC trunk orders (ASRs or TGSRs) that are within the CLEC's reasonable forecast regardless of what the current usage data is.

Business Rules:

Blocked calls and total calls are gathered during 20 business days.

71. Common Transport Trunk Group Blockage

Definition:

Percentage of local common transport trunk groups exceeding 2% blockage.

Exclusions:

- No data is collected on weekends.
- Blocking caused by unforecasted load on a CLECs network that overflows or routes to the Common Transport Trunk Groups. CLEC is to be notified when exclusion is applied for the CLEC.

Business Rules:

Common transport trunk groups that reflect blocking in excess of 2% or 1%(if a separate common transport trunk group is established to carry CLEC traffic only) using a busy hour from the four most recent weeks of data.

Levels of Disaggregation:

- Common trunk groups where CLECs share ILEC trunks
- Common trunk groups for CLECs not shared by ILEC

Calculation:

(# of common transport trunk groups exceeding 2% blocking ÷ total common transport trunk groups) * 100

Report Structure:

73. Percent Installations Completed Within Customer Requested Due Date – Interconnection Trunks

Definition:

Percentage of trunk order due dates for interconnection trunks met within customer requested due date when that due date is later than or equal to the standard interval or, if expedited, (accepted or not accepted) the date agreed to by SBC Midwest.

Exclusions:

- CLEC Caused Misses.

Business Rules:

The Due Date starts the clock. The Completion Date is the day that SBC Midwest personnel complete the service order activity and it is accepted by the CLEC, which stops the clock. The source is WFA (Work Force Administration) and is at an item or circuit level.

Delay of SBC Midwest-Initiated Tandem Re-homing project notification – the notification of any delay of these projects will be via LERG update and also via accessible letter sent to the CLECs. SBC Midwest will be responsible to modify the due date as defined in the accessible letter and notify the CLEC of this revised due date. The 30 days will be measured against this new due date established and sent to the CLEC

Levels of Disaggregation:

- 911
- OS/DA
- SS7
- Interconnection Trunks (Non projects – subject to standard interval)
- Interconnection Trunks (Projects – subject to negotiated interval)
- Tandem Re-homing – SBC Midwest owned/initiated (subject to negotiated interval and excluded from all other disaggregations)

75. Percentage SBC Midwest Caused Missed Due Dates > 30 Days – Interconnection Trunks

Definition:

Percentage of Interconnection Trunk Circuits where installation was completed greater than 30 calendar days following the due date. The installations measured are SBC Midwest caused missed due dates.

Exclusions:

- None

Formatted: Bullets and Numbering

Business Rules:

This measure counts the SBC Midwest caused missed dates (> 30 days) in the numerator. The day calculation is the difference in calendar days between the completion date (the date the CLEC accepts the circuit) and the due date. The source is WFA (Work Force Administration) and is at an item or circuit level.

Levels of Disaggregation:

Local Number Portability (LNP)

91. Percentage of LNP Only Orders within the Customer Requested Due Date

Definition:

Percentage of LNP Only Orders that are completed within or on the Customer Requested Due Date.

Exclusions:

- CLEC caused or requested delays.
- NPAC caused delays unless caused by SBC Midwest.
- CLEC requested Due Dates less than 3 business days.

Business Rules:

The clock starts on the date of FOC issuance, which is the date that SBC Midwest returned a FOC to the CLEC. The clock stops on the Completion Date, which is the date that SBC Midwest completed the order. Orders are included in the month they posted. Standard due date interval for LNP Only orders is three business days.

For >100 TNs the due dates are negotiated.

96. Percentage Pre-Mature Disconnects for LNP Orders

Definition:

Percentage of LNP cutovers where SBC Midwest prematurely removes the translations, including the 10-digit trigger, prior to the scheduled conversion time.

Exclusions:

- Coordinated Conversions.

Business Rules:

The count of incidents, on an order level, where the translations are released prior to the scheduled conversion. Count the number of cutovers that are prematurely disconnected (translations released prior to the due date).

Levels of Disaggregation:

- LNP only.
- LNP with Loop.

Calculation:

97. Percentage of Time SBC Midwest Applies the 10-digit Trigger Prior to the LNP Order Due Date

Definition:

Percentage of time SBC Midwest applies 10-digit trigger, where technically feasible, for LNP or LNP with loop TNs on the day prior to the due date.

Exclusions:

- Where not technically feasible.
- CLEC caused misses. (Some Examples are: When the CLEC delays the due date/conversion prior to due date minus 1; When the CLEC fails to correct the SO jeopardy related to ESOIs prior to due date minus 1; When the CLEC changes the due date or expedites a due date and the interval is less than 1 day.
- Orders where the CLEC has given SBC Midwest less than 1 day to provision the LNP/LNP w/loop service order.

Business Rules:

Obtain number of LNP or LNP with loop TNs where the 10-digit trigger was applied on the day prior to due date, and the total number of LNP or LNP with Loop TNs where the 10-digit trigger was applied, where technically feasible.

Levels of Disaggregation:

- LNP only
- LNP with Loop

Calculation:

98. Percentage LNP Trouble Reports within 30 Days of Installation

Definition:

Percentage of LNP lines that receive a network customer trouble report within 30 calendar days of service order completion.

Exclusions:

- Excluding subsequent reports and all disposition codes “11”, “12”, & “13” reports (excludable reports).
- Trouble reports caused by CPE or inside wiring.

Business Rules:

Includes trouble reports received the day after SBC Midwest personnel complete the service order through 30 calendar days after completion.

The denominator for this measure is the total count of lines on orders posted within the reporting month. However, the denominator will at a minimum be equal to the numerator.

The numerator is the number of trouble reports received on or within 30 days after service order completion and closed within the reporting month.

Levels of Disaggregation:

- None

Calculation:

(# of LNP lines that receive a network customer trouble report within 30 calendar days of service order completion ÷ total LNP lines) * 100

101. Percent Out of Service < 60 minutes

Definition:

The Number of LNP related conversions where the time required to facilitate the activation of the port in SBC Midwest’s network is less than 60, expressed as a percentage of total number of activations that took place.

Exclusions:

- CLEC caused errors.
- NPAC caused errors unless caused by SBC Midwest.
- Large ports greater than 500 ports.

Business Rules:

The Start time is the Time that an “activate NPAC” broadcast is received in SBC Midwest's LSMS. The End time is the Time the provisioning event is complete in SBC Midwest's LSMS. Count the number of conversions that took place in less than 60 minutes.

Deleted: There is no difference between the denominator for this measure and the denominator in measure #100.

Levels of Disaggregation:

Deleted: 103. Percent Accuracy for 911 Database Updates (Facility-Based Providers) ¶

<#>¶

<#>Definition:¶

<#>The percentage of 911 records that were updated by SBC Midwest in error. ¶

<#>Exclusions:¶

<#>CLEC Caused Errors.¶

<#>Business Rules:¶

<#>The data required to calculate this measurement will be provided by the CLEC based on the compare file. CLEC requests a compare file in writing through their assigned SBC Midwest Account Manager. This request should provide the requesting company's name (per CLEC interconnection or resale agreement), ACNA, requested geographic area (e.g., state, NPA, etc.), if the compare file is requested by email, diskette, CD-ROM, and the CLEC contact name, number, and e-mail address. Upon request, SBC Midwest will provide, within 14 business days of request receipt, an electronic compare file. CLEC will be provided a file that contains all customer information for the geographic area that they request (e.g., state, NPA, etc.). The file can be provided via CR-ROM, diskette, paper or as an electronic file (transmitted) The CLEC will provide the number of records transmitted and the errors found. SBC Midwest will verify the records determined to be in error to validate that the records were input by SBC Midwest incorrectly. An update is completed without error if the database completely and accurately reflects the activity specified on the order submitted by the CLEC. ¶

<#>Levels of Disaggregation:¶

Collocation

107. Percentage Missed Collocation Due Dates

Definition:

The percentage of SBC Midwest caused missed due dates for collocation projects.

Exclusions:

If the CLEC has not submitted their second fifty percent (50%) payment prior to the space being turned over, SBC Midwest will exclude the job from reporting. For instances where the payment has rightfully been withheld, (the account manager provides the notification to proceed), the job is not excluded.

Business Rules:

This includes orders completed after the due date, due to an SBC Midwest reason. Due Date Extensions will be extended when mutually agreed to by SBC Midwest and the CLEC or when a CLEC fails to complete work items for which they are responsible.

Levels of Disaggregation:

- New
- Augments

(Note: All approved types, e.g. Cages, Cageless, etc. are now included in these two disaggregations.)

Directory Assistance Database

110. Percentage of Updates Completed into the DA Database within 72 Hours for Facility-Based CLECs

Definition:

The percentage of DA database updates completed within 72 hours of receipt of the update from the CLEC for directory changes.

Exclusions:

- Weekends and Holidays, except for Martin Luther King Day and Good Friday.
- CLEC caused errors.
- Updates rejected due to incorrect/invalid data from the facility-based CLEC (e.g. missing a zip code, incomplete phone number, etc.)

Business Rules:

For manual updates, the date and time stamp on fax updates starts the clock and the date and time when the listing is updated stops the clock. On manual requests received after 4:00 p.m. the clock will start at 7:30 a.m. the following day.

For electronic updates, the clock starts at 4:00 p.m. on the date of arrival and stops when the listing is updated. Electronic orders received after 4:00 p.m. will not be processed until the following workday.

The update clerk's work hours are 7:30 a.m. to 4:00 p.m. Monday through Friday in accordance with the time zone of the receiving center.

Levels of Disaggregation:

- IN, MI, OH, WI = None

112. Percentage DA Database Accuracy For Manual Updates for Facility-Based CLECs

Definition:

The percentage of DA records that were updated by SBC Midwest correctly. The data required to calculate this measurement will be provided by the CLEC. The CLEC will provide the number of records transmitted and the errors found. SBC Midwest will verify the records determined to be in error to validate that the records were input by SBC Midwest incorrectly.

Exclusions:

- Errors not submitted within 10 days of order confirmation receipt.
- CLEC caused errors
- Weekends and Holidays, except for Martin Luther King Day and Good Friday.
- Updates rejected due to incorrect/invalid data from the facility-based CLEC (e.g. missing a zip code, incomplete phone number, etc)

Business Rules:

This measure includes, for the month, all updates that required manual intervention in the denominator. The numerator reflects those updates included in the denominator that were not reported by the CLEC and confirmed by SBC to have been updated in error.

Levels of Disaggregation:

- None

Calculation:

(# of manually handled updates without SBC Midwest caused errors. ÷ Total updates that required manual intervention) *100

Deleted: CLEC WI 4 Accuracy of Processing CLEC Corrections Based on Review of Directory Information (Issue L)

Definition:

Measures number of errors in final review and in printed directory that were not corrected after notice by CLEC of needed correction.

Exclusions:

Listings with incorrect information submitted by CLEC.

Business Rules:

Directory listings are submitted for a first review (first pre-BOC), and then after corrections are made, for a final review (second pre-BOC) prior to publication. The first pre-BOC will be provided 45 calendar days in advance of the directory close date. The second pre-BOC, if requested, will be provided 15 calendar days in advance of directory close. CLECs will be required to request the second pre-BOC 30 calendar days before the directory close date. In order for changes from the first pre-BOC to be entered on the second pre-BOC, CLECs must provide those changes not less than 4 business days before the delivery of the second pre-BOC. This is measured on a per-book basis.

Levels of Disaggregation:

First Pre-BOC

Second Pre-BOC

Calculation:

(# of listings without errors after correction requested ÷ Total updates submitted) * 100

Coordinated Conversions

114. Percentage of Premature Disconnects (Coordinated Cutovers)

Definition:

Percentage of coordinated cutovers where SBC Midwest prematurely disconnects the customer 10 minutes or more prior to the CLEC call to start the CHC or scheduled time for an FDT conversion.

Exclusions:

- None

Business Rules:

A CHC premature disconnect occurs any time SBC Midwest disconnects the CLEC customer 10 or more minutes prior to the CLEC calling to initiate the CHC for CHC orders, or 10 minutes or more prior to the scheduled time for FDT orders. CHC and FDT orders, by definition, must consist of 1-24 lines, therefore this measure only includes orders with 1-24 lines.

Levels of Disaggregation:

- Coordinated Hot Cuts – LNP with Loop
- Frame Due Time – LNP with Loop

Calculation:

$(\# \text{ of prematurely disconnected CHC/FDT LNP with Loop orders} \div \text{total coordinated CHC/FDT LNP with Loop orders}) * 100$

114.1. CHC/FDT LNP with Loop Provisioning Interval

Definition:

The % of CHC/FDT LNP with Loop Lines completed by SBC Midwest within the established provisioning intervals.

Exclusions:

- CHC/FDT LNP with Loop with greater than 24 loops (including multiple LSRs totaling 25 or more lines to the same customer premise on the due date).
- CLEC caused delays (e.g., no dial tone from CLEC: CLEC translations) that do not allow SBC Midwest the opportunity to complete CHC/FDT LNP with Loop within the designated interval.
- IDLC (pair gain systems) identified on or before the due date.
- Any order in the FMOD process

Business Rules:

The start time is at the direction of the CLEC and based on a negotiated and scheduled time for coordinated hot cut orders (CHC). For CHC orders, the clock starts when the CLEC calls the SBC Midwest LOC to initiate the conversion, and ends when SBC Midwest called the CLEC to notify that the cutover has been completed. For FDT orders, the clock starts at the scheduled due time and ends when the SBC Midwest technician completes the cross-connect to the CLEC facilities. This measurement only includes Coordinated Hot Cuts and FDT orders with 1-24 loops. A conversion with 25 or more lines (including multiple orders totaling 25 or more lines to the same customer premise on the same due date) is considered a project and is negotiated with the CLEC at the time of conversion.

Levels of Disaggregation:

- CHC/LNP with loop
 - < 10 lines
 - 10-24 lines
- FDT/LNP with loop
 - < 10 lines
 - 10-24 lines

Calculation:

(Total CHC/FDT LNP with Loop Lines within the designated interval ÷ total CHC/FDT LNP with Loop lines) * 100.

115. Percentage of SBC Midwest Caused Delayed Coordinated Cutovers

Definition:

CHC Percentage of SBC Midwest caused late coordinated cutovers in excess of "X" (30, 60 and 120) minutes from the time the CLEC calls to initiate a CHC plus the allowed appropriate interval for the cut.

FDT Percentage of SBC Midwest caused late coordinated cutovers in excess of "X" (30, 60 and 120) minutes after the scheduled cut time.

Exclusions:

- Any order in the FMOD process

Business Rules:

A coordinated cutover is delayed if SBC Midwest's work is not complete within "X" (30, 60, and 120) minutes after the scheduled plus allowable work time for the cutover.

- For CHC orders any delay is calculated starting from the time the CLEC calls to initiate the CHC plus the appropriate time interval allowed for the cut to be completed in (1 hour for CHC orders with less than 10 lines, 2 hours for CHC orders with 10-24 lines) until the time of completion of the CHC work.
- For FDT Orders the delay is calculated starting from the scheduled time for the FDT cutover.

CHC and FDT orders, by definition, must consist of 1-24 lines, therefore this measure only includes orders with 1-24 lines

Levels of Disaggregation:

- CHC LNP with Loop
- FDT LNP with Loop

Calculation:

(# of SBC Midwest caused late coordinated CHC/FDT LNP with Loop orders in excess of "X" (30, 60 and 120) minutes ÷ total coordinated CHC/FDT LNP with Loop orders) * 100

Report Structure:

115.1 Percent Provisioning Trouble Reports (PTR)

Definition:

Measures the percent of CHC/FDT circuits for which the CLEC submits a trouble report on a completed order on the day of conversion.

Exclusions:

- Reports for which the trouble is attributable to the SBC Midwest network (unless SBC Midwest had knowledge of the trouble prior to the due date.
- IDLC (pair gain systems) identified on or before the due date
- Non-measured reports (CPE, Interexchange, and Information reports).

Business Rules:

The percent of CHC/FDT circuits for which the CLEC submits a trouble report on a completed order on the day of conversion, or before noon on the next LOC business day. CHC and FDT orders, by definition, must consist of 1-24 lines, therefore this measure only includes orders with 1-24 lines

Levels of Disaggregation:

- CHC
- FDT

Calculation:

(Count of CHC/FDT circuits for which the CLEC submits a trouble report on a completed order on the day of conversion or before noon on the next LOC business day after conversion ÷ total # of CHC/FDT circuits converted) * 100.

Change Management

124. Timely Resolution of Significant Software Failures Related with Releases

Definition:

Measures timely resolution of software errors after a Release that is having a significant impact on CLEC business activity.

Exclusions:

- Error where a workaround transparent to the CLEC is available (workaround in this sense does not include manual faxing to the LSC or any other action required by the CLEC) that is different from what would be required if the software had not failed.

Business Rules:

Software errors identified in production within two weeks of the release with no work-arounds that have a disabling affect on CLECs ability to conduct business. Significant or disabling effect on the CLEC is defined as an inability to pass to SBC Midwest, or receive back from SBC Midwest, order activity on more than 10% of the CLEC LSRs relative to normal work volumes. This impact will be viewed on a per CLEC basis, upon notification by the CLEC to the OSS Help Desk that they are impacted. Problem resolution time will start being measured from the time the problem is reported to the help desk to the time the software fix is implemented or a workaround that does not require the CLEC to do anything different from what would be required if the software had not failed is in place. For Tier 1 damages, the CLEC is responsible for reporting the problem to the OSS Help Desk in order for this measure to apply to the individual CLECs and will be paid to those identified with an impact of 10% or more as outlined above.

Levels of Disaggregation:

- None

Calculation:

(# Significant Software Failures resolved within 48 hours ÷ Total Significant Software Failures)*100

Report Structure:

- Reported by CLEC on a SBC Midwest Regional basis (non-state specific). (Company level reporting,)

124.1 Test Environment Availability

Definition:

Extent that the Joint Test Environment is actually available to CLECs.

Exclusions:

- None

Business Rules:

The total “Scheduled system available hours” is the cumulative number of hours during the reporting period that SBC Midwest has committed to provide CLECs access to the Joint Test Environment. “Hours functionality is available during the scheduled available hours” is the actual number of hours, during scheduled system available hours, during which the Joint Test Environment is actually available for testing purposes. The actual time available is divided by the scheduled time available and the result multiplied by 100 to produce the “Percent system availability” measure.

Scheduled system available hours is Monday through Friday, 8:00AM to 5:00PM CT (except as noticed to the industry via Accessible Letter). “Hours functionality is available during the scheduled available hours” is calculated from the date/time a CLEC reports its inability to access the Joint Test Environment to the date/time the reporting CLEC is able to access the Joint Test Environment, based on records maintained by SBC Midwest’s Joint Test Environment Availability Team.

Only situations where the inability of the CLEC to access the Joint Test Environment is confirmed to be due to a problem within the control of SBC Midwest are to be included in this measure. Situations where a CLEC cannot access the Joint Test Environment due to problems outside the control of SBC Midwest (e.g. internal CLEC network connectivity or performance issues) will not be included in this PM

Levels of Disaggregation:

- Pre-Order
- Order

Calculation:

$$\frac{[(\text{Hours functionality is available during the scheduled available hours}) \div \text{Scheduled system available hours}] * 100}{}$$

Report Structure:

- Reported on an aggregate CLEC basis and a SBC Midwest-region basis (non-state specific). (Company level reporting.)

MI 15 Change Management

Definition:

Change management measures timeliness of change notifications for final requirements to implementation as defined and agreed upon in the SBC Competitive Local Exchange Carrier (CLEC) 13-State Interface Change Management Process (“CMP”). Interfaces to which this measure applies also will be defined in the CMP.

Exclusions:

- Clarification Notes.
- Any Approved Exceptions.
- Emergency Situations
- Regulatory Mandated Changes

Business Rules:

Calendar Days is to be used in the calculation of this measure. Notification is received when the Final Release Requirements are noticed to CLECs via an Accessible Letter. Calculation is based on the number of Notifications made within the reporting period (the denominator), with the numerator being the number of those Notifications issued “X” days or more in advance of the announced implementation date.

Levels of Disaggregation:

- Changes to Existing Interfaces
 - Gateway
 - GUI
- Introductions of New Interfaces
 - Gateway
 - GUI
- Retirements of Existing Interfaces -- Wholesale Interfaces
 - Gateway
 - GUI

Calculation:

(Number of Notifications issued on time) ÷ (Number of Notifications in the reporting period) * 100

Report Structure:

- Reported on an SBC Midwest regional basis (non-state specific). Company level reporting.

Attachment Two

Percentage of Missed Collocation Due Dates Damages and Assessments Methodology

The following methodology will apply in calculating Tier 1 liquidated damages and Tier 2 assessments for the percentage of missed collocation due dates measurement.

Tier 1:

1. The benchmark will be 95% of Collocations completed within the due date. For example, if a CLEC has 30 collocations complete in the study month, SBC Midwest can miss one due date and still be in compliance. In this case no damages would apply. If, two due dates out of 30 were missed, SBC Midwest would be out of compliance. In this case, damages would be payable on the number of collocations required to be back within the 95% benchmark.
2. Damages are calculated based on the percentage of days that SBC Midwest misses the due date using the per occurrence values in the business rules, multiplied by the number of days from completion to due date.
3. In order to determine which collocations to use in the damage calculation, the missed collocation due dates will be ranked based on the number of days missed from highest to lowest. SBC Midwest will pay damages on the highest number of days missed until the number of collocations missed is within the benchmark. For example, if there were three misses which had missed days of 20, 15 and three, SBC Midwest would pay damages on 35 (20+15) missed days. In this example, SBC Midwest would pay $35 * (95\% - 90\%) * 150 = \262.50
4. Should a remedy plan in effect call for the use of the K-table, the collocation measurement will be used in the determination of the "K" number of allowances (based on the number of collocations). In addition, it may also be excluded as defined in the business rules in the order of progression also contained there. The number of underlying data points used for the purposes of determining the order of exclusion will be the same total days late for collocation projects calculated above (35 in the previous example). Should a remedy plan not include the K-table component, this paragraph #4 is not applicable.
5. All collocation completions in a month will be considered for the calculation of liquidated damages.
6. The critical Z-value will not be subtracted from the benchmark to determine compliance.

Formatted: Indent: Left: 108 pt, Space After: 0 pt

Tier 2:

1. Assessments will be applicable when the measurement has been out of compliance for three consecutive months for the aggregate of all CLEC collocations.
2. Compliance will be defined as described in the Tier 1 damages above.
3. If assessments are applicable, the rolling three month average for days missed will be used to calculate the total assessments payable to the State Treasury.

Percentage of Missed Collocation Due Dates Damages and Assessments Methodology 197

10.4 Percentage of Orders Given Jeopardy Notices

Definition:

Percentage of orders given jeopardy notices measures the number of orders for which jeopardy notices are sent to customers as a percentage of the total number of orders due in the calendar month.

Exclusions:

CLEC End User-Initiated Jeopardy Codes.

Service orders that fall into, or are completed thru, the FMOD process.

Orders that are received from a CLEC with a same-day due date.

Business Rules:

An 870 is a jeopardy notice that is sent to the CLEC to notify them that an LSR order’s confirmed due date is in jeopardy of being missed. Unsolicited FOCs will be counted as Jeopardies. The calculation is based on 870 notices sent during

system processing hours. System processing hours can be found on the CLEC Online website. This information can be accessed in the following manner:

- 1) Go to CLEC Online,
- 2) Select CLEC Handbook,
- 3) Choose a Midwest State,
- 4) Select OSS,
- 5) Select Operating Hours. (The spreadsheet portion shows the interface hours while the footnote will show the processing hours for each region.)

Levels of Disaggregation:

Resale POTS

All CLECs

SBC Midwest Affiliate

Measurement Type:

Tier 1 - None

Tier 2 - None

Benchmark:

Not to exceed 5% of orders given jeopardy notices.

MI 13.1 Average Delay Days For Mechanized Line Loss Notifications

Definition:

Average business days from completion of work to the date the line loss notification was sent/made available to the CLEC for line loss notifications that miss the standard of one business day.

Exclusions:

Line Loss Notifications that are delayed due to a CLEC cause that prevents SBC Midwest from completing the order and thus sending the line loss notification

Business Rules:

Days are calculated by subtracting the date the line loss notification was sent/made available to the losing CLEC from the work completion date. The date that the last service order associated with the winning carrier’s service request is provisioned is the work completion date. The calculation is based on business days, using a full 24-hour day. Only those notifications that were sent/made available outside the one business day standard are included in this measure.

This measure includes all product/ordering scenarios for which loss notifications are to be sent according to the business rules documented on CLEC OnLine website, including retail winbacks.

Where CLEC accesses SBC Midwest – LEC’s systems using a non-SBC required Service Bureau Provider, the measurement of SBC Midwest – LEC’s performance shall not include Service Bureau Provider processing, availability or response time.

Levels of Disaggregation:

- All (combination of two disaggregations below)
- SBC Winback (SBC Retail is the “winning” carrier, CLEC is losing carrier)
- CLEC-to-CLEC (CLEC A is “winning” carrier, CLEC B is “losing” carrier)

Calculation:

$\Sigma(\text{Work completion date for line loss notifications sent outside the standard} - \text{Date LLN sent/made}) \div (\text{total line loss notifications sent outside the standard})$

Report Structure:

- Reported for -
- CLEC
- All CLECs
- SBC Midwest Affiliate.

Measurement Type:

IL/ IN/OH/WI	MI	
Tier 1	None	Remedied
Tier 2	None	Remedied

Benchmark:

MI - Average Delay of 4 Days; Remedies apply only to the “All” disaggregation; SBC Winback and CLEC-to-CLEC results are not separately subject to remedies . The number of payable occurrences shall be determined by the specified calculation logic in the remedy plan, except that the number of payable occurrences shall not exceed the number of LLNs delayed by more than 4 days.

IL/IN/OH/WI - Diagnostic

125. Percent Matching UNE-P Provisioning & Billing DB Records

Definition:

Percent of UNE-P circuit-level ACIS CSR records with posted service order activity that would generate a monthly recurring charge, that match the corresponding UNE-P circuit level CABS billing records.

Exclusions:

Circuits with pending UNE-P service order activity between ACIS and CABS as of the end of the reporting month (posted to ACIS but not yet posted to CABS) where the activity is unposted to CABS for less than 30 calendar days from the completion date will be excluded from the test sample.

UNE-P orders/circuits that post to ACIS but are not designed to post to CABS (e.g. Directory Listings updates).

UNE-P orders/circuits that post to billing in CABS but are not designed to post to the ACIS CSR (e.g., UNE loops, interconnection trunks).

Business Rules:

A statistically valid sample of circuit-level billable provisioning records updated in, or added to, ACIS in the report month will be compared to the corresponding recurring billing record updated in, or added to, CABS. The comparison will assess all updates to CABS for UNE-P services and/or features that generate monthly recurring charges. The statistically valid sample will be established from the total number of UNE-P service orders that process from ACIS to CABS in the reporting month. The number of records compared will be sufficient to assure 95% confidence in the test result.

If any of the bill-affecting services and/or features do not match when the corresponding ACIS and CABS UNE-P circuit records are compared, the update will be deemed a “miss” for reporting purposes.

Levels of Disaggregation:

None

Calculation:

$(\# \text{ of matching UNE-P ACIS/CABS records} \div \text{total number of records sampled}) * 100$

CLEC BLG-2 Percent of Billing Claims Acknowledged within 5 Business Days**Definition:**

Measures the percent of time that SBC Midwest acknowledges CLEC billing claims/disputes within 5 business days of receipt by SBC Midwest.

Exclusions:

Rejected Claims

Claims received on non-standard forms
Holidays and Weekends
Excludes Access and LSB Billing claims

Exclusion definitions are detailed on CLEC Online and can be found in the Billing Adjustments and Claims section of the CLEC Online Handbook at <https://clec.sbc.com/clec/hb/>.

Business Rules:

The purpose of this measure is to track the percentage of billing claims that are acknowledged in 5 business days. Acknowledged claims are entered into the billing claims tracking system. The start time for this measure is the date of receipt by SBC Midwest. Day of receipt shall be considered Day zero (0) for computing acknowledgement performance. The end time is the date the acknowledgement (confirmation letter) is sent to the CLEC.

Claims are included in the result in the month the acknowledgement is sent.

Any valid Local claims sent to the e-mail address of

AICS-TC.Billing@Ameritech.com

will be included. Any claims that are incorrectly sent to this e-mail address will be rejected.

Any valid Collocation claims sent to the e-mail address of

AITCBLCL@txmail.sbc.com

will be included. Any claims that are incorrectly sent to this e-mail address will be rejected.

Levels of Disaggregation:

27. Mean Installation Interval

Definition:

Average business days from application date to completion date for N, T, C orders.

Exclusions:

CLEC caused and/or end-user caused misses.

Orders where the requested due date is greater than the standard/offered installation interval.

CIA Centrex excluded if customer requested due dates greater than 5 business days.

Orders that are not N, T, and C orders.

UNE-P Orders if included in a project (as mutually agreed upon by CLECs and SBC

Midwest or as defined as Projects on the CLEC Online website).

[The steps for access to the above Project information are: 1) Go to CLEC Online, 2) Select CLEC Handbook, 3) Choose a SBC Midwest State, 4) Select Ordering, 5) Select Due Date Matrix, 6) Select Resale matrix or UNE matrix.]

Orders for ISDN product

Business Rules:

The clock starts on the Application Date, which is the day that SBC Midwest receives a correct Service Order except in the case of a manually submitted order (facsimile, US Mail, or other hard-copy delivery service), when the clock starts at FOC date/time. The clock stops on the Completion Date, which is the day that SBC Midwest personnel complete the service order activity. Orders are included in the month they are posted. There are 2 types of No Field Work orders in the measurement. A) Same Day Due orders defined as distribution time EQUAL or BEFORE 3:00 p.m. and Application Date = Distribution Date = Due Date; and B) Next Day Due orders defined as distribution time AFTER 3:00 p.m. and Application Date = Distribution Date and Due Date is one business day after Application Date. If the order is Same Day Due, then the interval is (Completion – Application Date). If the order is Next Day Due, then the interval is [(Completion – Next Business Day) + 1]. UNE-Ps are also reported at order level.

If an order is completed on a Saturday, Sunday, or Holiday, SBC Midwest will include that day in the calculation of interval.

28. Percent POTS/UNE-P Installations Completed Within the Customer Requested Due Date

Definition:

Measure of orders completed within the customer requested due date when that date is later than or equal to the offered due date/interval or, if expedited (accepted or not accepted), the date agreed to by SBC Midwest.

Exclusions:

CLEC caused and/or end-user caused misses.
All orders except N, T, and C orders.
Facility misses as counted in PM 30.
Orders for ISDN products

Business Rules:

The clock starts on the Application Date, which is the day that SBC Midwest receives a correct Service Order. The clock stops on the Completion Date, which is the day that SBC Midwest personnel complete the service, order activity. Orders are included in the month they are posted. Due dates for No Field Work orders will be assigned as defined on the CLEC Online website. UNE-Ps are also reported at order level.

If an order is completed on a Saturday, Sunday, or Holiday, SBC Midwest will include that day in the calculation of interval.

If an order is submitted on a non LSC business day and requires manual processing, then the order will be processed as if it were submitted on the next LSC business day.

Due dates for Field Work orders are determined by the company offered interval at the time that the order is received, unless an expedite has been accepted by SBC Midwest. If the CLEC submits an expedite which is not accepted or the LSR contains an invalid due date, the SBC Midwest agreed to due date will be substituted for the customer requested due date and included in this measure.

Due dates for No Field Work orders will be the due date requested on the LSR, except that, for a No Field Work order submitted after 3:00 p.m. and the due date requested is the same business day, the due date will be the next business day, unless an expedite has been accepted by SBC Midwest.

35.1 *Percent UNE-P Trouble Reports On the Completion Date*

Definition:

Percent of C orders for UNE-P conversions that receive an electronic or manual trouble report on the day of completion.

Exclusions:

Subsequent reports. A subsequent report is a repair report that is received while an existing repair report is open on the same number.

Reports caused by customer provided equipment (CPE) or wiring.

Disposition codes “11”(except subcode 11), “12”, & “13” reports (excludable reports).

Orders for ISDN products

Business Rules:

Includes reports received on the day of completion for UNE-P conversion orders. The denominator for this measure is the total count of UNE-P orders posted within the reporting month. The numerator is the number of trouble reports received at any time on the day of completion. These will be reported the month that the trouble report is closed.

103. Percent Accuracy for 911 Database Updates (Facility-Based Providers)

Definition:

The percentage of 911 records that were updated by SBC Midwest in error.

Exclusions:

CLEC Caused Errors.

Business Rules:

The data required to calculate this measurement will be provided by the CLEC based on the compare file. CLEC requests a compare file in writing through their assigned SBC Midwest Account Manager. This request should provide the requesting company's name (per CLEC interconnection or resale agreement), ACNA, requested geographic area (e.g., state, NPA, etc.), if the compare file is requested by email, diskette, CD-ROM, and the CLEC contact name, number, and e-mail address. Upon request, SBC Midwest will provide, within 14 business days of request receipt, an electronic compare file. CLEC will be provided a file that contains all customer information for the geographic area that they request (e.g., state, NPA, etc.). The file can be provided via CR-ROM, diskette, paper or as an electronic file (transmitted) The CLEC will provide the number of records transmitted and the errors found. SBC Midwest will verify the records determined to be in error to validate that the records were input by SBC Midwest incorrectly. An update is completed without error if the database completely and accurately reflects the activity specified on the order submitted by the CLEC.

MI 5. Structure Requests Completed Outside of Interval

Definition:

Structure Requests Completed Outside of Interval measures the number of requests to view SBC Midwest structure records that are not completed within the standard time interval as a percentage of requests completed in the reporting period.

Exclusions:

Requests for SBC Midwest to perform record checks.

Business Rules:

Structure includes poles, ducts, conduit and rights-of-way that are owned or controlled by SBC Midwest. The request is counted in the period in which the request is completed. Changes to the request will be deemed to be a new request and will result in a new date being established for the priority queue. Requests received after 12:00 noon Eastern Standard Time are considered received the following business day. Interval calculation is based on business days.

Information Access includes requests for viewing (or copies). A field survey is a physical check of manholes and/or poles to determine availability of space for placing the attaching Party's facilities. Make Ready is any construction work necessary to prepare SBC Midwest structure for attachment or occupancy by an attaching Party.

108. Average Delay Days for SBC Midwest Missed Due Dates

Definition:

The average delay days caused by SBC Midwest to complete collocation facilities.

Exclusions:

If the CLEC has not submitted their second fifty percent (50%) payment prior to the space being turned over, SBC Midwest will exclude the job from reporting. For instances where the payment has rightfully been withheld, (the account manager provides the notification to proceed), the job is not excluded

Business Rules:

This includes orders completed after the due date, due to a SBC Midwest reason. Due Date Extensions will be extended when mutually agreed to by SBC Midwest and the CLEC or when a CLEC fails to complete work items for which they are responsible.

Levels of Disaggregation:

New

Augments

(Note: All approved types, e.g. Cages, Cageless, etc. are now included in these two disaggregations.)

MI 4. Average Time to Provide a Collocation Arrangement

Definition:

Average Time to Provide a Physical Collocation Arrangement measures the average elapsed time between the date a collocation COBO payment is received and the date the CLEC is notified that the physical node is completed, for the total number of physical nodes completed in the reporting period.

Exclusions:

Canceled orders.

Orders where the customer requested a due date beyond the contractual date.

CLEC-caused delays such as arranging final walk-through or accepting collocation space.

Business Rules:

The clock starts when SBC/Midwest receives, in compliance with the Commission Order, approved interconnection agreement or effective tariff, whichever is applicable, the Acceptance form, and applicable payment, from the CLEC and the clock stops when the CLEC receives notice in writing or other method agreed to by the parties that the collocation arrangement is complete and ready for CLEC occupancy. SBC Midwest will turn over the APOT with the notice of job completion if the CLEC has submitted their second fifty-percent (50%) payment prior to the due date.

Levels of Disaggregation:

CLEC WI 4 Accuracy of Processing CLEC Corrections Based on Review of Directory Information (Issue L)

Definition:

Measures number of errors in final review and in printed directory that were not corrected after notice by CLEC of needed correction.

Exclusions:

Listings with incorrect information submitted by CLEC.

Business Rules:

Directory listings are submitted for a first review (first pre-BOC), and then after corrections are made, for a final review (second pre-BOC) prior to publication. The first pre-BOC will be provided 45 calendar days in advance of the directory close date. The second pre-BOC, if requested, will be provided 15 calendar days in advance of directory close. CLECs will be required to request the second pre-BOC 30 calendar days before the directory close date. In order for changes from the first pre-BOC to be entered on the second pre-BOC, CLECs must provide those changes not less than 4 business days before the delivery of the second pre-BOC. This is measured on a per-book basis.

Levels of Disaggregation:

First Pre-BOC

Second Pre-BOC

Calculation:

(# of listings without errors after correction requested ÷ Total updates submitted) *100

Report Structure:

Reported for -

CLEC

All CLECs for facility-based providers,
SBC Midwest Affiliate.

Measurement Type:

If the benchmark is not met for corrections requested after the first review, the \$200 charge for the second pre-BOC will be waived by SBC Midwest Directory Operations..
If the Benchmark is not met for corrections requested after the second pre-BOC, the remedy will be

IL/IN/MI/WI	OH
Tier 1 Remedied	High
Tier 2 None	None

Benchmark:

For corrections requested in the review of the first pre-BOC 95% must be corrected in the second pre-BOC

For corrections noted in the review of the second pre-BOC 99% of those corrections requested initially must be corrected in the final published directory.

Attachment One

Advanced and Nascent Services

In order to ensure parity and benchmark performance where CLECs order low volumes of advanced and nascent services, SBC Midwest will make increased voluntary payments to the State Treasury's in the SBC Midwest region on those measurements listed under "Qualifying Measurements" below. Such increased voluntary payments will only apply when there are more than 10 and less than 100 observations for a Qualifying Measurement on average statewide for a three-month period with respect to the following order categories:

The following are the qualifying sub-measures (if within a qualifying measurement):

UNE loop and port combinations;

Resold ISDN;

ISDN UNE loop and port combinations;

BRI loop with test access; and

DSL loops.

Qualifying Measurements:

Provisioning Measurements:

PMs 28, 44, 56 – Percent Installs Completed Within Customer Requested Due Date

PMs 35, 46, 59 – Installation Trouble Reports Within "X" Days

PM 1.1 – Average Response Time for Loop Qualification Information

Maintenance Measurements:

PMs 38, 66 – % Missed Repair Commitments

PMs 41, 53, 69 – % Repeat Reports

PMs 39, 52, 67 – Mean Time to Restore

PMs 37.1, 54.1, 65.1 – Trouble Report Rate

The increased voluntary payments referenced in section 1.0 will be made only if SBC Midwest fails to provide parity or benchmark service for the above measurements as determined by the use (where appropriate) of the Modified Z-test and a Critical Z-value for either:

3 consecutive months; or

6 months or more in a calendar year.

The increased voluntary payments will only be calculated on the rolling average of occurrences or measurements, as appropriate, where SBC Midwest has failed to provide parity or benchmark performance for 3 consecutive months. If SBC Midwest fails to provide parity or benchmark performance in Illinois for 6 or more months in a calendar year, the increased voluntary payments will be calculated as if all such months were missed consecutively.

If, for the three months that are utilized to calculate the rolling average, there were 100 observations or more on average for the qualifying measurement or sub-measurement, then no increased voluntary payments will be made to the State Treasury's in the SBC Midwest region. However, if during this same time frame there either is (i) an average of more than 10 but less than 100 observations for a qualifying sub-measure on a statewide basis or (ii) an average of more than 10 but less than 100 for a non-qualifying sub-measure within a qualifying measure where the measure's average is more than 10 but less than 100 observations, then SBC Midwest shall calculate the payments to be made in

addition to the normal payment to the State Treasury’s in the SBC Midwest region by first applying the normal Tier 2 assessment calculation methodology to that qualifying measurement, and then doubling (multiplying by 2) that amount. The effect of this calculation results in total payment being made at three times the normal amount alone.

Any payments made hereunder shall be subject to the annual threshold set forth in the remedy plan.

Attachment Two

Performance Measures with Remedy Limits

Measurements That Are Subject to Per Occurrence Damages or Assessment With a Cap

- Percent Response Received Within "X" Seconds – OSS Interfaces (PM 2)
- Percent Firm Order Confirmations (FOCs) Received Within "X" Hours/Days (PM 5)
